Créer un service SystemD simple

SystemD a beaucoup trop d'option, voici un exemple avec beaucoup d'options communes

gitea.service

```
[Unit]
Description=Gitea (Git with a cup of tea)
After=syslog.target
After=network.target
After=mysql.service

[Service]
Type=simple
User=git
Group=git
SyslogIdentifier=gitea
WorkingDirectory=/opt/gitea/
ExecStart=/opt/gitea/gitea web
Restart=always
Environment=USER=git HOME=/home/git

[Install]
WantedBy=multi-user.target
```
